| Description of Request       | Development and integration of additional system functionalities to improve administrative control, user interaction, and intelligent issue management                                                          |        |      |          |
| Date Submitted               | 29/10/2025                                                                                                                                                                                                      |        |      |          |
| Date Required                | 29/10/2025                                                                                                                                                                                                      |        |      |          |
| Change Priority              | Low                                                                                                                                                                                                             | Medium | High | Critical |
| Reason(s) for Change         | To expand ReportNow beyond core reporting into a more intelligent, interactive platform that enhances user experience, administrative efficiency, and issue response accuracy.                                  |        |      |          |
| Initial Impact Analysis      | Medium-to-high development complexity. Introduces new dependencies (map integration, chatbot API) and additional data validation flows. Expected to increase server load slightly but within acceptable limits. |        |      |          |
| Components Impacted          | Front-end UI, chatbot service, mapping APIs, database schema for issue metadata, and admin dashboard features.                                                                                                  |        |      |          |
| Estimated Time Required      | 2–3 weeks                                                                                                                                                                                                       |        |      |          |
| Estimated Cost Required      | \$0 - Recommended                                                                                                                                                                                               |        |      |          |
| Change Implementation        | Led by Wei Ming with support from Dylan (front-end), Seo Hyeon (back-end), and Jun Howe (release integration).                                                                                                  |        |      |          |
| Quality Assurance/Testing    | Unit and integration testing by Kean Yee. Overall validation by Yong Huat.                                                                                                                                      |        |      |          |
| Comments and Recommendations | -                                                                                                                                                                                                               |        |      |          |
